

# The simplest way to turn cash into any crypto — on your rails.

Loadit is the AI money app for the cash economy. MoneyGram Ramps is the licensed cash-in rail. Together we give 350,000+ counters a modern, non-custodial front-end: cash in, any crypto out, in one tap — with MoneyGram as the regulated money-transmitter and Loadit as the intelligence that routes the rest.

## HOW IT WORKS

Cash → MoneyGram → USDC on Stellar → HQ swaps → BTC / SOL / ETH → user's wallet

## WHY LOADIT IS THE RIGHT WALLET PARTNER

- Non-custodial by construction**  
 Loadit orchestrates; it never holds funds. That's structurally aligned with how Ramps works — MoneyGram stays the money-transmitter of record.
- HQ removes the crypto learning curve**  
 Users don't pick chains, bridges, or wallets to fund. They say what they want; HQ routes cash → USDC → asset in one flow.
- Live product, real users**  
 The iOS app is shipping with HQ, the Load flow, and live provider quotes. This is a front-end ready to send you volume, not a concept.
- Transparent 0.75% fee**  
 One flat, visible fee — cheaper than banks, cards, and crypto ATMs. Simple pricing that spreads by word of mouth in cash-first communities.

## INTEGRATION READINESS

SEP-1 **stellar.toml live**  
 Hosted at [loadit.net/.well-known/stellar.toml](https://loadit.net/.well-known/stellar.toml).

SEP-10 / 24 **Ready to wire**  
 Interactive deposit against your anchor.

SWAP LAYER **Provider-agnostic**  
 USDC→asset executor plugs in on your signal.

## THE ASK

Production anchor access + wallet-partner onboarding, and a pilot cash corridor to prove the flow end to end.
